

As a professional pattern maker with over 35 years in the industry, and 30 years working with CAD pattern making solutions, I have seen many advancements since my manual pattern making days. At the time we founded Patternworks, Inc. in 1999, we made an investment in the most capable pattern making software offering we could find at the time. While this served our purposes as we began to grow our client base, we soon discovered its limitations as we felt the pattern software was not evolving in comparison to others on the market.

Then we discovered StyleCAD, a program which offered advanced pattern making features with an intuitive interface and myriad of import and export options which would allow us to communicate more easily with other software programs. We quickly realized it would be in our best interest to convert our many workstations to this new and exciting pattern making solution. Our employees love using it and we love their new levels of productivity.

We look forward to growing with StyleCAD and hope to enhance our existing programs with their latest 3D module.
