

"After working on StyleCAD for about half a year Benny and I have gathered quick feedback notes for the StyleCAD staff. We will bullet point all notes for you to quickly review.

We will begin with how much we like the StyleCAD program and how much **more efficient** it has been for us than our prior cad system, Lectra:

- PDS acts like Adobe Illustrator, has a **nice flow**
- Shortcut Keys make the process in PSD and Marking easy and faster. They are also very easy to use and remember.
- Measuring and side tool bars make pattern making on a computer **SUPER easy and efficient!** Cut/Join and Graphics tool bars are **time savers!**
- The dividing line feature is **the BEST**. No more having to divide a line's length in your head and on a calculator then having to convert that decimal into a fraction.
- Being able to **input any type of measurement** (fractions, eighths, thirty seconds, decimals) and having the system still recognize it is hands on the greatest thing to happen to cad.
- Learning to grade on StyleCAD was **100% more simple** than learning on Lectra and Gerber combined.
- Being able to select and move more than one pattern piece at a time without having to select a tool to do so on Marking makes StyleCAD superior to Lectra's Diamino. Marking also has the feature where you can hover over a tool on the side tool bar and it will tell you what the name of that tool is, unlike Diamino.

In conclusion, if either of us were to move on in our careers to other companies we would have them convert to StyleCAD."
